## HISTORY AND SOCIAL STUDIES

*If a nation expects to be ignorant and free, in a state of civilization, it expects what never was and never will be . . . I know of no safe depository of the ultimate powers of the society but the people themselves. And if we think them not enlightened enough to exercise their control with wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education.* - Thomas Jefferson

Public education in Minnesota must help students gain the knowledge and skills that are necessary to, in Jefferson's view, protect and maintain freedom. The Social Studies Standards on the following pages attempt to do just this by specifying the particular knowledge and skills that Minnesota students will be required to learn in the disciplines of U.S. History, World History, Geography, Economics and Civics as required by Minnesota statutes.

These standards are written with the recognition that additional academic disciplines, Psychology, Sociology, and Anthropology, have strong traditions of instruction in Minnesota schools. Schools may choose to continue teaching in these academic disciplines as local traditions, interest, and school priorities dictate.

## **Minnesota Academic Standards in History and Social Studies**

### **HISTORY**

#### **What is History?**

The study of History (Minnesota, U.S., and World) helps students to see how people in other times and places have grappled with the fundamental questions of truth, justice, and personal responsibility, to understand that ideas have real consequences, and to realize that events are shaped both by ideas and the actions of individuals.

The study of U.S. History helps students understand the democratic traditions of the United States and how these traditions were established and how they continue in the present. U.S. History also helps students understand that the United States is a nation built on ordinary and extraordinary individuals united in an on-going quest for liberty, freedom, justice, and opportunity. It helps students understand how much courage and sacrifice it has taken to win and keep liberty and justice.

The study of World History helps students understand the major developments in the civilizations of Europe, the Middle East, Africa, Asia, and the Americas. World History helps students recognize the “common problems of all humankind, and the increasing interactions among nations and civilizations that have shaped much of human life” and how individuals and nations have successfully or unsuccessfully met the challenges of human nature and their environment.

#### **Why study History?**

American History should be studied because, as Kenneth T. Jackson - chair of the Bradley Commission on History in the Schools - states, “Unlike many other peoples, Americans are not bound together by a common religion or a common ethnicity. Instead, our binding heritage is a democratic vision of liberty, equality, and justice. If Americans are to preserve that vision and bring it to daily practice, it is imperative that all citizens understand how it was shaped in the past, when events and forces either helped or obstructed it, and how it has evolved down to the circumstances and political discourses of our own time.”

World History should be studied because of the increasing global connections in the areas of commerce, politics, technology and communications, transportation, and migration and resettlement. These increasing connections make an understanding of the history of the world’s many cultures especially important in fostering the respect and understanding required in a connected and interdependent world.

## Minnesota Academic Standards in Social Studies

### GEOGRAPHY

#### **What is Geography?**

Geography is the science of space and place on Earth's surface. It is an integrative discipline that brings together the physical and human dimensions of our world. Geography's subject matter is the spatial arrangement of the physical and human phenomena that make up the world's environments and gives character to places, large and small. Geography describes the changing patterns of places in words, maps, numbers and graphics, explains how these patterns come to be, and unravels their meaning.

Geography captures the imagination. It stimulates curiosity about the world and the world's diverse inhabitants and places as well as about local regions and global issues. It enables us to understand our home by opening windows on the rest of the world.

#### **Why study Geography?**

To be successful contributors to a democratic society, all individuals need to have an understanding of geography, which means that they need to have an understanding of the spatial context of people, places and environments on Earth.

The geographically literate person knows where important things are, why they are located in those places and the significance of the locational patterns of the world. Furthermore, she comprehends the nature and significance of multiple connections between people and places around the world.

---

This statement on the nature of geographic education is based on *Geography for Life: National Geography Standards* developed by the Geography Education Standards Project on behalf of the American Geographical Society, Association of American Geographers, National Council for Geographic Education and the National Geographic Society.

## **Minnesota Academic Standards in History and Social Studies**

### **ECONOMICS**

#### **What is Economics?**

Economics is the study of how people coordinate their wants and desires, given scarce resources and the decision-making mechanisms, social customs, and political realities of their societies. Decisions made by consumers, workers, investors, managers, and government officials interact to determine the allocation of scarce resources.

Economics is a way of thinking about the world based on a set of principles that are useful for understanding almost any economic situation, from decisions that individuals make to the workings of highly complex international financial markets.

Economists have developed principles that are useful in understanding the economic decisions of individuals and firms (Microeconomics). Economists also examine the behavior of the economy as a whole through such measures as unemployment, inflation, economic growth, and balance of trade (Macroeconomics).

#### **Why study Economics?**

Today's students will face an increasing variety of important economic decisions in their personal lives and as citizens in a democratic society. The study of economics enables students to make reasoned judgments about both personal economic questions and broader questions of economic policy in a complex and changing world. A basic grasp of how markets works and of the tradeoffs involved in trying to meet unlimited wants with limited resources is essential for meaningful democratic dialogue on what government should or should not be doing.

## **Minnesota Academic Standards in History and Social Studies**

### **GOVERNMENT AND CITIZENSHIP**

*A people who mean to be their own governors must arm themselves with the power which knowledge gives.*  
-James Madison

#### **What is Civic Education?**

Civic education in a democracy helps students gain the knowledge and skills needed for informed, responsible participation in public life. It is the study of constitutional principles and the democratic foundation of our national, state and local institutions. Civic education also studies political processes and structures of government, grounded in the understanding of constitutional government under the rule of law.

#### **Why study Civic Education?**

Students will know how to participate to make a difference and will have the skills required for competent participation in the political process, including the capacity to influence policies and the ability to monitor and evaluate the performance of public officials. The aim of civic education is not just any kind of participation by any kind of citizen; it is the participation of informed and responsible citizens, skilled in the arts of deliberation and effective action.
